3-SIDE SEALED BAGS

3-Side Sealed Bag is one of the most economical and easy packaging options for various products. It is also known as Flat Pouch and is commonly used for packaging processed food, frozen food, dry nuts, and snacks. Because of its flat shape, the bags can be stacked in a pile easily and most retail stores take this advantage to minimize the shelf space using. This style of bag provides large front display area for label placement. Its strong side seals offer the best sealing strength among all types of bags, therefore it is considered to be a very good option for vacuum packaging as well as heavy duty packaging.

GUSSET BAGS

Gusset Bag is widely used in coffee and tea industry. The rectangular shape with either quad-seal (also known as corner-sealed) and side-sealed options provides 3-D appearance to make the package more dynamic.

The Side-Sealed gusset bag has the seal hidden on the edge at the back of the bag. The printed area on the back significantly increases once the seal is moved to the side. It allows the design to flow around the entire bag.

Quad-Sealed gusset bag reinforces the shape of bag with its four corners sealed. It provides a cube shape look while sitting on the shelf.

STAND-UP POUCH

Stand-Up Pouch becomes popular in most of retail stores and supermarkets. The inserted bottom gusset makes it available to stand up for great shelf display and 3D appearance. The flexible shape and light weight substantially reduce the transportation and storage cost, and minimizes the shelf space using. That is why most retail markets are switching to this packaging style: A great replacement for cans, boxes, containers and other rigid packaging.

SPOUT POUCH

Spout Pouch is well developed flexible packaging style in Europe and Asia. Both Stand-Up Spout pouch and 3-Side Sealed Spout pouch is ideal and reliable for liquid, powder and granulated products. Our spout pouches are designed to replaced bottles and containers with easy pouring features and reclosable spout while remaining economical solutions compared to rigid packaging. Traditional bottles make some liquid sauce product extremely difficult to pour or push out. With flexible body, customers can easily squeeze products out. Moreover, the flexible shape and light weight substantially reduce the transportation and storage cost, and minimizes the shelf space using.
